

CANVAS CLASH

Future & Conceptual Design • Industrial & Spatial Design

THE CONCEPT

Canvas Clash is a live, zero-day design challenge. The actual design brief is revealed on the day, and participants must develop, communicate and present a design response under time pressure using their personal digital design tools.

CATEGORY 01 • JUNIOR

FUTURE & CONCEPTUAL DESIGN

GRADES 6–8 • HUMAN ONLY

Future-facing concepts and possibilities. Design thinking, visual communication and originality take centre stage.

CATEGORY 02 • SENIOR

INDUSTRIAL & SPATIAL DESIGN

GRADES 9–10 • AI PERMITTED

Physical products, environments and spatial solutions shaped around emerging technology and real-world constraints.

WHAT TO BRING

DEVICE COMPULSORY

Bring a charged personal laptop or tablet.

DIGITAL DESIGN

Use your preferred digital design software and workflow.

ZERO-DAY

The actual brief drops live on the event day.

AI RULE

Junior: Human Only. Senior: AI Permitted + prompt log.

THE DROP → THE DESIGN SPRINT → THE PITCH

The examples on the following pages illustrate the challenge style only. The actual problems are revealed on the day.

FUTURE & CONCEPTUAL DESIGN

HUMAN ONLY • AI NOT PERMITTED

Sample challenge briefs demonstrate the style and difficulty of the Junior category. They are NOT the actual competition questions.

01 SMART CLOTHING FOR CHANGING WEATHER

People can leave home in comfortable weather and return when conditions have changed significantly. Design a piece of clothing that can adapt to changing weather conditions during the day while remaining practical and comfortable to wear.

02 THE AR MUSEUM EXPERIENCE

Museums are beginning to use augmented reality to provide additional information about exhibits, but visitors can become so focused on their devices that they stop engaging with the physical objects. Design a museum exhibit that combines a physical artefact with an AR experience without allowing the digital layer to overpower the real one.

03 THE MODERN CLASSROOM STORAGE SYSTEM

Modern classrooms increasingly contain laptops, tablets, robotics kits and other equipment, but traditional cupboards were designed mainly for books and stationery. Design a classroom storage system that safely organises and charges modern educational technology while keeping equipment easily accessible.

INDUSTRIAL & SPATIAL DESIGN

AI PERMITTED • PROMPT LOG REQUIRED

Sample challenge briefs demonstrate the style and difficulty of the Senior category. They are NOT the actual competition questions.

01 THE AUTONOMOUS AIRPORT

Airports were designed around human-controlled vehicles, but future autonomous aircraft, ground vehicles and delivery systems will introduce new movement patterns. Design a section of a future airport that allows autonomous vehicles and passengers to move safely through the same environment.

02 THE LUNAR LIVING UNIT

A permanent lunar settlement will have extremely limited space, resources and access to replacement equipment. Design a modular living unit that combines sleeping, working, storage and essential services while allowing the same space to serve different purposes.

03 ADAPTIVE FASHION FOR A CHANGING BODY

Clothing is usually manufactured in fixed sizes even though a person's body shape can change throughout the day or over time. Design an adaptive garment system that can change its fit without requiring the wearer to replace the garment, while maintaining comfort, appearance and structural integrity.

THE ZERO-DAY

THE EXAMPLES ARE NOT THE QUESTIONS YOU WILL RECEIVE.

01 THE DROP

The actual Canvas Clash brief is revealed live on the event day.

02 THE DESIGN SPRINT

Research, ideate, sketch, model, refine and present a complete design response under the event's time limit.

03 DIGITAL DESIGN

Laptops or tablets are the design medium. The outcome may be a physical product, object, environment, space, structure or other design concept.

04 THE PITCH

Present the design clearly, explain the problem it solves and defend the decisions behind the final concept.

05 AI POLICY

Junior: Human Only. Senior: AI Permitted. Senior participants must maintain and submit an AI prompt log where AI is used.

CORE IDEA

Canvas Clash is about solving a future-facing design problem—not about making something merely look futuristic. Strong responses connect technology, people, space and real-world constraints.
