

SCENE SYNC

Digital Content & Creator Economy • Grades 8–10

THE CONCEPT

Scene Sync is a live, zero-day media challenge built around digital content, creators, audiences and the creator economy. The actual brief is revealed on the day; participants must create, edit, package and present a compelling media response under real time pressure.

SINGLE CATEGORY • GRADES 8–10

DIGITAL CONTENT & CREATOR ECONOMY

AI PERMITTED • MANDATORY PROMPT LOG

Create content that earns attention, communicates a message and works for a real audience — from reels and trailers to campaigns, creator content and platform strategy.

WHAT TO BRING

DEVICE COMPULSORY

Bring a charged personal laptop or tablet.

DIGITAL WORKFLOW

Use your preferred editing, design and production software.

ZERO-DAY

The actual challenge brief is revealed on the event day.

AI POLICY

AI is permitted. Submit the required AI prompt log.

THE DROP → THE CREATE → THE EDIT → THE PITCH

The following briefs are sample problems only. The actual Scene Sync challenge is revealed on the day.

SAMPLE PROBLEMS

THESE ARE NOT THE ACTUAL ZERO-DAY QUESTIONS

These examples show the style and range of Scene Sync. They are reference briefs only; participants receive a completely new problem during the event.

01 THE 100K REEL

A new creator makes short videos explaining unusual technology to teenagers, but their videos rarely cross 5,000 views. Create a 30–45 second reel explaining how facial-recognition systems work that is designed to maximise retention and encourage viewers to share it.

02 THE NIGHT MARKET TRAILER

A city is opening a new night market featuring independent food vendors, local musicians and small businesses. The organisers have only ordinary phone footage of the stalls and performers. Create a cinematic 30–45 second trailer using only the supplied footage, editing, typography and sound design.

03 THE CLICK PROBLEM

A technology creator has produced a video comparing three budget laptops for students, but the video receives very few clicks despite strong viewer retention once people watch it. Create a thumbnail, title concept and opening sequence designed to increase clicks without misleading the audience.

MORE THAN VIDEO EDITING

DIGITAL CONTENT • CREATOR ECONOMY • AUDIENCE THINKING

01 ATTENTION

Build a hook that earns the first few seconds of a viewer's attention.

02 STORY

Turn an idea, product, place or message into something people want to watch.

03 PLATFORM

Adapt content to the way audiences behave on different digital platforms.

04 PACKAGING

Make the thumbnail, title, opening and visual identity work together.

05 CREATOR THINKING

Create around a specific audience, creator identity and measurable objective.

06 AI + HUMAN JUDGEMENT

Use AI where useful, then verify, refine and make deliberate creative decisions.

THE OUTPUT IS THE MESSAGE

Scene Sync is not simply about making something polished. Strong responses know who they are speaking to, why that audience should care, and how the content earns attention.

THE ZERO-DAY

GRADES 8–10 • AI PERMITTED • PROMPT LOG REQUIRED

01 THE DROP

The actual Scene Sync prompt is revealed live on the event day.

02 THE CREATE

Plan the concept, audience, hook, story and production approach within the challenge time.

03 THE EDIT

Produce the required media output using your chosen digital tools, supplied assets and permitted AI workflow.

04 THE PITCH

Present the final content and explain the creative decisions, audience strategy and reasoning behind it.

05 AI ADVANTAGE

AI is permitted. Where AI is used, participants must submit their prompt history and demonstrate critical refinement.

SCENE SYNC

Create something people would actually stop for, watch, remember and share. The brief changes. The audience does not get easier.
